**LIVESTOCK**  
powered by Farm4all®

The Farm4all® Livestock solution manages all processes of livestock activity such as: Reproduction, breeding, rearing, field fattening, feedlot of animals and dairy production. It covers all livestock management, with the control of nutrition and food, management of the reproduction of animals and their categories with productivity indicators, in addition to integrating farming fields with livestock, making use of agriculture field for the fattening of animals. It is also possible to track each head of cattle and control their costs across all cycles.

In feedlot, it aims to control the fattening of animals, including the purchase, identification and sale of animals. It also control the animals certifications to serve markets that require individual identification.
