SEED PROCESSING

Farm4all

The Farm4all® Seed Processing solution manages the fields for seed production, contemplating the planning of varieties, providing excellence in the process of planting, harvesting, marketing and after-sales of seeds.

At the Seed Processing Unit is possible to carry out the entire processing process, as well as the appointment of laboratory analysis, in order to record and trace the seeds with effective control and safety.

Also performing the technical breakdown of storage, packing, batch classification, marketing and contract management.
